The first part of the course is devoted to the study of the thermodynamic properties of pure substances. This includes the study of the phase diagrams of pure substances, the calculation of the thermodynamic properties of pure substances, and the study of the thermodynamic properties of mixtures.

The second part of the course is devoted to the study of the thermodynamic properties of solutions. This includes the study of the phase diagrams of solutions, the calculation of the thermodynamic properties of solutions, and the study of the thermodynamic properties of mixtures.

The third part of the course is devoted to the study of the thermodynamic properties of reactions. This includes the study of the phase diagrams of reactions, the calculation of the thermodynamic properties of reactions, and the study of the thermodynamic properties of mixtures.

The fourth part of the course is devoted to the study of the thermodynamic properties of systems. This includes the study of the phase diagrams of systems, the calculation of the thermodynamic properties of systems, and the study of the thermodynamic properties of mixtures.
